What is Tramadol?

Tramadol is a prescription pain reliever used to treat moderate to moderately severe pain. It belongs to the opioid analgesic class, acting on the central nervous system to alter how your body senses and responds to pain. Many patients use Tramadol to manage chronic pain conditions such as arthritis, fibromyalgia, or post-surgical discomfort.

Unlike over-the-counter medications, Tramadol requires careful dosage and professional handling — which is why MedsFedex.com ensures that every purchase passes through a verified online health process before shipment.
