What is Tramadol (Ultram)?

Tramadol, commonly marketed as **Ultram**, is a **prescription opioid pain reliever** used to treat **moderate to severe pain**, including chronic conditions and post-surgical pain. It works by **altering the perception of pain in the brain and nervous system**, while also influencing **serotonin and norepinephrine pathways** to enhance pain control.

Tramadol is available in **immediate-release and extended-release formulations**, providing **flexibility for individualized treatment plans**.

How Tramadol Works

Tramadol binds to **opioid receptors** in the central nervous system, reducing pain perception. It also **modulates neurotransmitters** such as serotonin and norepinephrine, providing both **short-term relief** (immediate-release) and **long-lasting management** (extended-release).
